

Styles of Bamboo

Plain pressed

In the plain pressed version the bamboo strips are positioned horizontally and glued together which provides a bamboo board with a wide line pattern in which the characteristic bamboo nodes clearly visible.

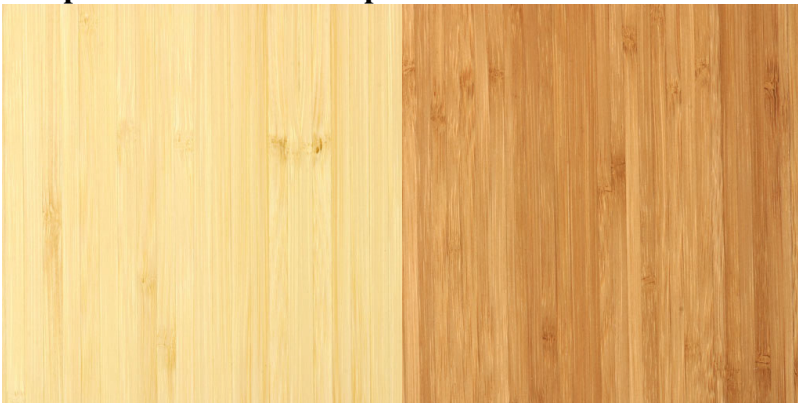

plain pressed natural - plain pressed caramel

Side pressed

In the side pressed version the bamboo strips are positioned vertically and glued together which creates a bamboo board with a narrow line pattern in which the bamboo nodes visible in a subtle way.

side pressed natural - side pressed caramel

High Density®

In the high Density® version the bamboo strips are compressed and glued together under high pressure, also known as strand woven bamboo.

This provides a very hard bamboo floor with an elegant random line pattern.

high Density® natural - high Density® caramel

Forest

In the Forest version the bamboo stem is flattened through a special process to create the toplayer of a solid bamboo board. The result is a very strong and hard floor with the unique, original look of the bamboo stem.
